

Top 10 Claude Ecosystem Tools

Skills - Plugins - CLIs - MCP Servers | 2026 Research Corpus | NexusPoint

Plugins

1	Frontend Design	829k	Enforces production-grade UI/UX before writing code. Kills AI slop aesthetics.
2	Superpowers	752k	Full SDLC workflow kit: brainstorming, TDD, subagent delegation, code review, debugging.
3	Code-Simplifier	284k	Anthropic's own refactoring plugin. Improves readability, zero behavior change. Run pre-PR.
4	TypeScript LSP	177k	IDE-grade intelligence in Claude Code: jump-to-def, type errors, diagnostics after edits.
5	Security Guidance	175k	Real-time hook warnings on injection/XSS/unsafe patterns as Claude writes.
6	Pyright LSP	91k	TypeScript LSP equivalent for Python.
7	Caveman	-	~65% fewer output tokens. Compresses responses without losing substance.
8	Commit Commands	-	Structured git commit workflow. Part of the recommended lean starter stack.
9	GitHub MCP plugin	-	PR/issue/code review actions wired directly into Claude Code sessions.
10	Composio plugin	-	Access 1,000+ app integrations from one authenticated gateway.

Items 7-10: named in corpus but install counts not in locked reference. [s29, s32, s33]

MCP Servers

1	Context7	348k installs. Pulls live version-specific docs into context. Kills outdated-API hallucinations. [s32]
2	Composio	Managed MCP gateway: secure auth + 1,000+ app actions in one server. [s32]
3	Firecrawl	Reliable web scraping, search, and browser automation. Clean markdown from JS-heavy pages. [s33]
4	Zilliz claude-context	Semantic code search via vector index (BM25 + dense). ~40% token reduction vs scanning dirs. [s237]
5	GitHub MCP	Repos, PRs, issues, code review directly from Claude sessions.

6	llm-prices	Checks costs across 167 models before expensive requests. [s150]
7	Google Calendar / Gmail	Scheduling and email natively in Claude sessions.
8	Slack MCP	Read/send Slack messages; useful for team coordination in agentic workflows.
9	Linear MCP	Create/update issues, query project state. Popular in engineering teams.
10	Notion MCP	Read/write Notion pages and databases from Claude.

Items 7-10: well-known production MCP servers; specific citations not in locked corpus.

CLIs

1	Claude Code	The CLI itself. Hooks, MCP, skills, subagents, headless runs. The whole stack.
2	Claudebase	Backs up/syncs your entire Claude Code config to a private GitHub repo. [s114, s116]
3	claude-mem	Persistent SQLite memory. Auto-captures, AI-compresses, re-injects context. 35.9k stars. [s150]
4	getburnd	Scans session files for token leaks. Cost control for heavy Claude Code users. [s150]
5	gh (GitHub CLI)	Standard git/PR workflow CLI. Pairs natively with Claude Code's GitHub MCP.
6	gws	Google Workspace CLI. Gmail, Drive, Docs, Sheets, Calendar from the terminal.
7	notebooklm-py	CLI for NotebookLM: create notebooks, add sources, run research passes programmatically.
8	aider	Open-source AI pair programmer CLI; supports Claude models as the backend.
9	llm (Simon Willison)	Lightweight CLI for running prompts across any Claude model; scriptable pipelines.
10	ccr (Cloud Code Runner)	Runs Claude Code sessions in remote cloud environments for long background tasks.

Items 8-10: widely used in the ecosystem; not in locked corpus. Treat as popular in practice, not corpus-verified.

Skills

1	brainstorming	Structured intent/requirements exploration before any build. Prevents building the wrong thing.
2	TDD	Enforces red-green-refactor. Rigid skill - not optional once invoked.

3	systematic-debugging	Step-by-step root cause isolation. Forces hypothesis before guessing.
4	subagent-driven-development	Parallelizes work across multiple Claude agents. Scales complex builds.
5	writing-plans	Structured implementation plans before touching code.
6	executing-plans	Drives plan execution with task tracking and checkpoint discipline.
7	code-review / ultra	Local diff review (low/med/high) or cloud multi-agent deep review.
8	verification-before-completion	Forces behavioral verification (not just tests) before marking a task done.
9	frontend-design	Production-grade UI/UX enforcement at the skill level (mirrors the plugin).
10	security-review	Structured security audit of changed code before shipping.

Skills 1-9 are Superpowers-bundled. Skill 10 is standalone.

Bottom line: Install Superpowers + Frontend Design + Context7 + TypeScript/Pyright LSP + Security Guidance as your baseline stack. That is the lean 5 the corpus recommends before adding anything else. [s32]
